

ZedGift API - Endpoint Reference

Base URL: <https://zedgift.viaaratech.com/api> | Auth: Bearer (JWT)

Source: ZedGift.postman_collection.json - for Zegar Flutter app integration

EXISTS (12 endpoints available in client API)

#	Method	Endpoint	Purpose
1	POST	/login	email + password -> token + user
2	POST	/refresh	refresh_token -> new access token
3	POST	/logout	invalidate session
4	GET	/employees	full employee list
5	GET	/employees/{id}	one employee full detail (salary, address, bank)
6	GET	/attendance/recent	today's recent punches
7	POST	/attendance/punch	clock in / out mark
8	GET	/attendance/status	is employee currently in or out (?employee_id=)
9	GET	/attendance/history	attendance history, paginated (?employee_id=)
10	POST	/attendance/face/register	register face image + descriptor
11	GET	/attendance/face/{id}	get registered face
12	POST	/attendance/face/verify	verify face match

MISSING (app has UI, but no endpoint in API)

App feature	Needed endpoint (absent)
Register Employee (add new)	POST /employees - only GET exists; no create/update/delete
Leave Requests (admin + employee)	GET / POST /leaves - none
Leave balance (annual / sick)	no endpoint
Payroll / Payslip history	/payroll - none (salary only in employee detail)
Announcements	/announcements - none
Departments list (dropdown)	/departments - none (embedded in data only)
Designations list (dropdown)	/designations - none
Employee types list (dropdown)	/employee-types - none
Admin dashboard stats	no present / on-time summary endpoint
Full day attendance (all emp, by date)	only /recent exists; no date-filtered list

Notes

- Core flows ready now: Login, Employee list/detail, Attendance (punch/status/history/face).
- API is read-only for employees: no create/update/delete, so add/edit must stay on the web admin panel.
- Leave, Payroll, Announcements, dropdown lists need NEW backend endpoints or stay mocked/hidden in app.
- App branding is 'Zegar'; backend is 'ZedGift' - field mapping needed during integration.
